OOPS Test 1

Ananya

Ans 1

```
abstract class Media {  
    abstract play();  
}
```

```
class Video extends Media {  
    play("this is a video");  
}
```

```
class Audio extends Media {  
    play(System.out.println("this is an audio"));  
    play("this is an audio");  
}
```

```
public static void main (String[] args)  
{
```

```
    Video video = new Video;
```

```
    Video play() -> System.out.println(video.  
                                play());
```

```
    Audio audio = new Audio;
```

```
    audio.play();
```

```
}
```

2

Ans: Interface Reservation System {
public makeReservation (int
private int number of seats ;
private int reservationId ;

```
public int makeReservation (int number of seats)  
{  
}  
public int cancelReservation (int reservationId)  
{  
}  
}
```

```
public class AirplaneReservation implements  
Reservation System {  
public void set makeReservation (int number of seats)  
{  
int number of seats ++ ;  
}  
public int get makeReservation (int number of seats)  
{  
return int number of seats ;  
}
```

```
public class BusReservation implements Reservation  
System {  
public void set makeReservation (int number  
of seats) {  
int number of seats ++ ;  
}  
public int get
```

Oops test 1

SapId = 500119141

Ans: Intraface Reservation system {

private int numberOfSeats;

private int reservationId;

// Creating methods

public int makeReservation (int numberOfSeats)

{

public int cancelReservation (int reservationId)

{

// Creating subclass Airplane Reservation

public class AirplaneReservation implements

ReservationSystem {

public void setmakeReservation (int numberOf

Seats) {

int numberOfSeats --; }

public int getmakeReservation (int numberOfSeats)

{

return int numberOfSeats; }

public void set cancelReservation (int reservationId)

{

int reservationId --; }

public void get cancelReservation (int reservationId)

{

return reservationId; }

// Creating subclass BusReservation

public class BusReservation implements Reservation

System {

public void setmakeReservation (int number

ofSeats) {

numberOfSeats --; }

```

    public int getmakeReservation (int numberOfseats)
    {
        return numberOfseats;
    }
    public void setcancelreservation (int reservationid)
    {
        reservationid --;
    }
    public voidint getcancelreservation (int reservationid)
    {
        return reservationid;
    }

```

// Main method

```

public static void main (String [] args)
{
    Airplanereservation ar = new Airplanereservation();
    Busreservation br = new Busreservation();
    ar.getmakeReservation ();
    ar.getcancelReservation ();
    br.getmakeReservation ();
    br.getcancelReservation ();
}

```

Ans 3. `public class Ticket {
 int seatNumber = 0;
 double price = 0;
 public void printTicket {
 System.out.println("Printing a Ticket");
 }
}`

`class public class StandardTicket extends Ticket {`

`super(seatNumber = 10);
 super(price = 500);`

`printTicket() {
 System.out.println("This is a standard
 ticket");
 }
}`

`public class VipTicket extends Ticket {`

`super(seatNumber = 10);
 super(price = 1000);`

`printTicket() {
 System.out.println("This is a VIP ticket");
 }
}`

`public static void main (String args [])
{`

`StandardTicket st = new StandardTicket;
 System.out.println(st.price);
 System.out.println(st.seatNumber);
}`

```

st. printTicket ();
VipTicket vt = new VipTicket ();
System.out.println (vt.price);
System.out.println (vt.seatnumber);
vt.printTicket ();

```

4

Ans-4 JVM (Java Virtual Machine) helps in running Java programs. In JVM we can only run java codes. JVM consists of different inbuilt classes, packages, subpackages, and methods.
